Splash Out

Your round, your customers and your money, all in one place.
A friendly guide to getting started.

In this guide

1. What Splash Out does
2. Setting up (once)
3. Adding your customers
4. A normal working day
5. Booking customers in
6. When someone skips
7. Getting paid
8. Looking after your customers
9. The Stats screen
10. The Round Sheet
11. The More menu
12. Keeping your data safe
13. Quick answers

1 What Splash Out does

Splash Out replaces your notebook or spreadsheet. It does six jobs for you:

Remembers your customers
Names, addresses, prices, notes and phone numbers.

Plans your round
Shows who is next, day by day, in round order.

Logs each clean
One tap: cleaned and paid, not paid, skipped.

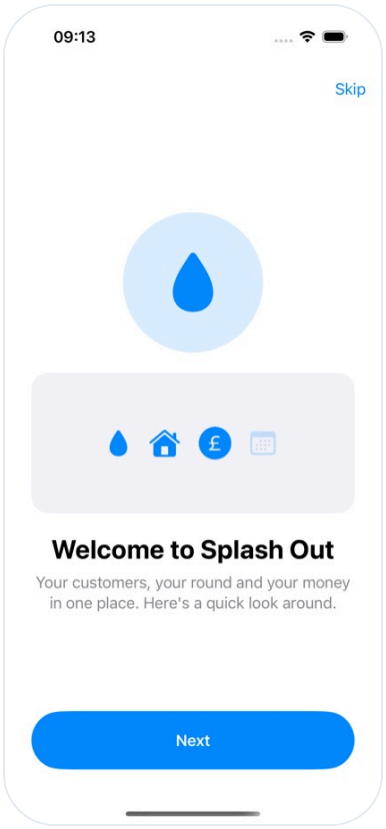

Tracks who owes you
Every unpaid clean, oldest first.

Shows how you're doing
Weekly targets, tax year income and more.

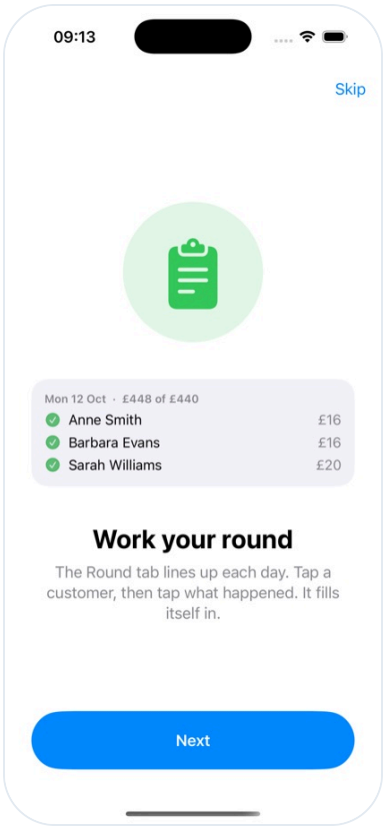

Messages customers
Opens WhatsApp with a ready-made message.

There are five tabs along the bottom (or the top on an iPad):

Stats	Round	Customers	Owed	More
how you're doing	who's next	everyone	who owes you	everything else

The quick tour shown the first time you open the app

Each step has a little animation

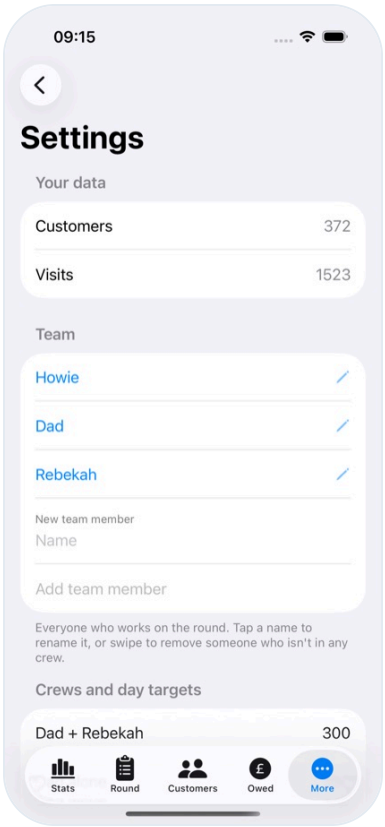

Quick tour. A short animated walk-through opens the first time you start the app. Run it again any time from More → Quick tour .

2 Setting up (once)

Do this first. It takes about five minutes and makes the Round screen work properly.

1. **Add your team.** Go to More → Settings → **Team**. Type each person's name and tap **Add team member**.
2. **Make your crews.** Under **Crews and day targets** tap **Add a crew...**. A crew is a combination of people who work together, such as "Sam + Alex" or just "Sam". Give each crew a **day target**: how many pounds of work it aims to do in a day.
3. **Set your usual week.** Under **Usual week** choose which crew works on each day. Leave days you don't work as "Not working".

Why this matters. The usual week and the targets are how the app knows how many customers to line up for each day.

Settings: your team, crews and usual week

3 Adding your customers

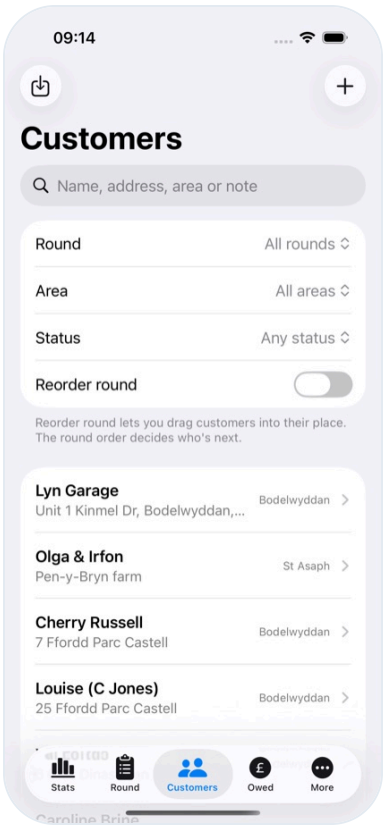

Bring in a list you already have

On the Customers tab tap the **download arrow** (top left) and pick a spreadsheet saved as a CSV file. Match each column to a field (Name, Address, Price…) and tap **Import**.

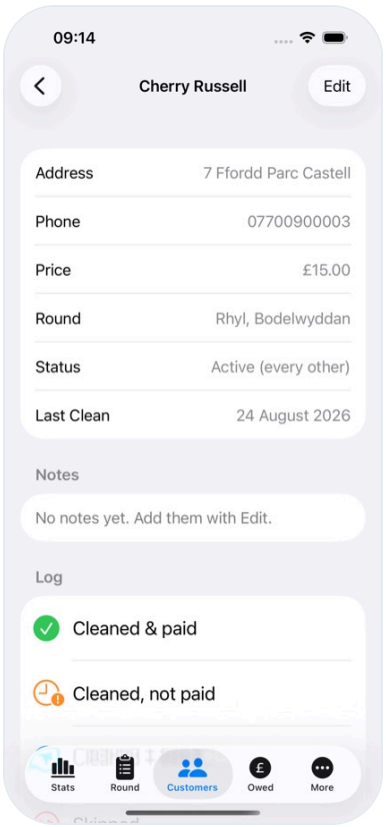

Or add one at a time

1. On the Customers tab tap **+**.
2. Fill in the name, address, phone and price. Tap **Import from Contacts** at the top to copy a name, number and address from your phone's Contacts.
3. Choose where they go in the round with **Place in round**, then tap **Save**.

Good to know. A new customer starts as **Not started**. They show greyed out on the Round, as a reminder, and aren't counted in the day's total. Tap them and choose **Start** when they're ready. (Their first logged clean also makes them Active.)

The Customers tab: search, filter and reorder

A customer's page

Handy extras on each customer

- **Every other clean**: for customers you only visit every other round.
- **Front only**: a reminder that only the front is done.
- **Notes**: gate codes, pets, parking. They show up when you tap the customer on the round.
- **Contact by**: WhatsApp or Ring, so you get the right button.

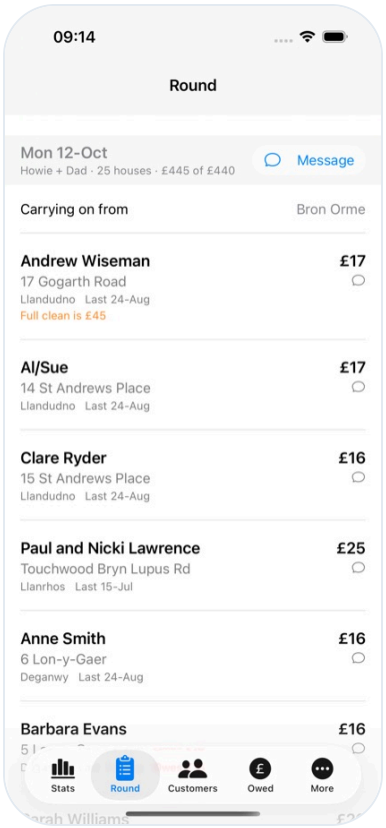

4 A normal working day

Open the **Round** tab. It lists customers day by day, in the order you work them. The date bar stays at the top as you scroll, so you always know which day you're looking at.

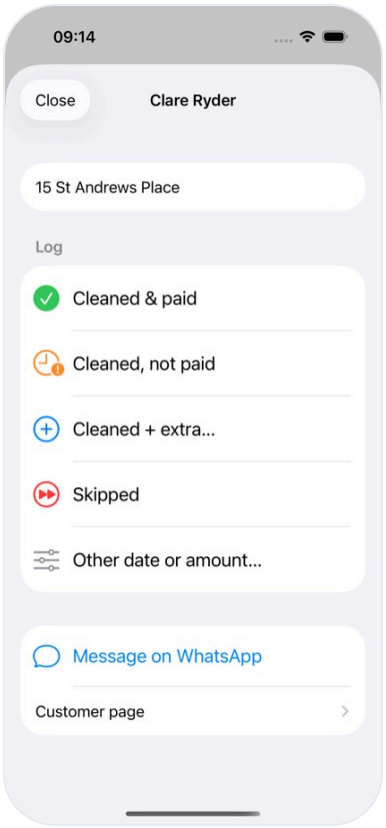

1. **Tap the customer you're at.** A panel opens with their address, notes and anything they owe.
2. **Tap what happened:**
    - 3. **Cleaned & paid**: done, and they paid. If they owe for earlier cleans, it asks whether they paid those too. For a customer with two prices (say front only one time, full the next) it asks which, with the one you didn't use last time first.
    - 4. **Cleaned, not paid**: done, they'll pay later. It goes on the Owed list.
    - 5. **Front only…**: asks the amount (it remembers last time's).
    - 6. **Cleaned + extra…**: for something extra (conservatory roof) or less (front only). Add a note.
    - 7. **Skipped**: you couldn't do them today. They stay in today's list marked Skipped, and come round again next time.
    - 8. **Not due**: for an every-other customer on their off round. You rarely need it: the app spots off rounds itself and shows those customers greyed with **EO · not this round**.
    - 9. **Other date or amount…**: for logging a clean from another day, or when they paid a different amount.
10. **Made a mistake?** A bar appears at the bottom for a few seconds. Tap **Undo**.

The list looks after itself. It carries on from where you'd got to at the start of the day, so working out of order never moves anyone else. Customers you've done today fold into one **Done today** row at the top (tap it to see them), and their money counts towards the day. The date bar shows **£ done** and **£ left**. Tomorrow, they drop off and come round again in about five weeks.

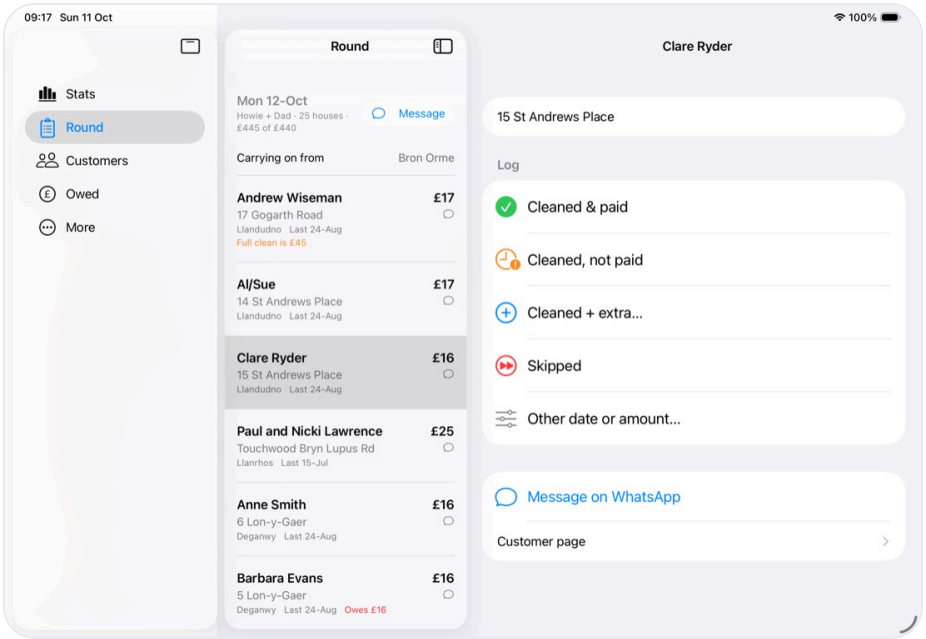

Quick way. On the Round or Customers tab, swipe a row right for **Paid** or **Not paid**, or left for **Skipped**.

The Round: one day at a time, with the date bar pinned

Tap a customer, then tap what happened

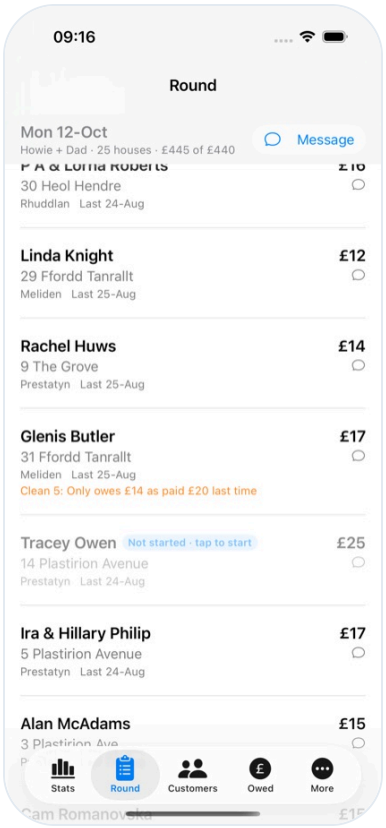

On an iPad the round and the logging panel sit side by side

Neighbours stay together

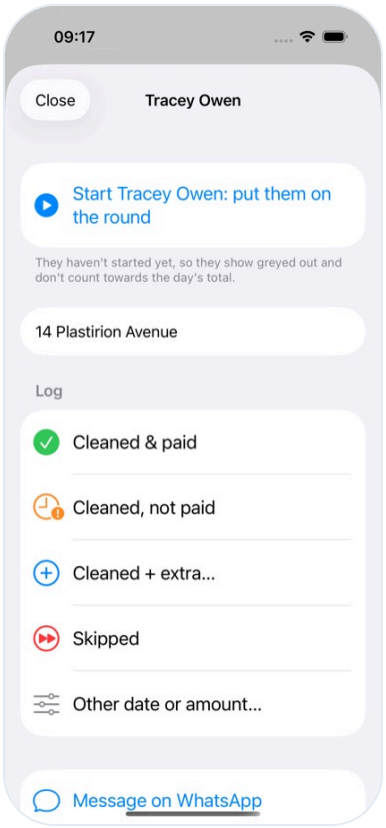

Customers next to each other in the round on the same street are kept on the same day, shown by a coloured bar down the side. If a street won't fit in what's left of a day, it starts the next day, and a later street that does fit fills the gap. If two halves of a street really belong to different days (or two streets belong together), open the customer and tap **Change group...** (or press and hold them on the Round list). Groups nearest first: join the one before or after, move to one further away (they move in the round to sit after it), take the house out on its own, or move its whole group.

New customers show greyed out

Someone who hasn't started yet appears in the round, greyed out, at the place where they belong. They don't count towards the day's total. Tap them and choose **Start ... put them on the round** to make them active.

A greyed-out customer waiting to be started

One tap puts them on the round

5 Booking customers in

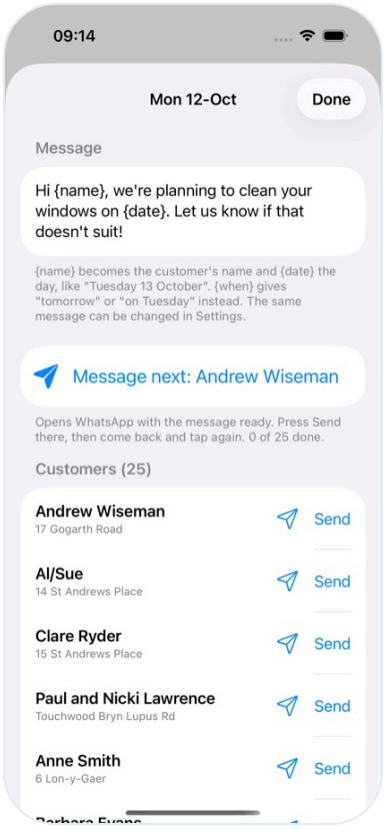

When you book people in, let them know which day you're coming.

1. On the **Round** tab, find the day and tap **Message** on its date bar.
2. You'll see the message ready to go. Tap **Message next**. WhatsApp opens with the message filled in for that customer.
3. Press **Send** in WhatsApp, then come back and tap **Message next** again. Each customer you've done gets a tick.

Messaging someone **books them in** for that day: they show a purple **Booked** tag and stay on that day, whatever else changes, until you log them.

The message fills in each customer's name and the day, for example *"Hi Anne, we're planning to clean your windows on Tuesday 13 October."* Change the wording any time in **More** → **Settings** → **WhatsApp message**.

Phone numbers. A customer with no number shows **Add number from Contacts** on their page. Tap it and pick them from your Contacts. WhatsApp itself makes you press Send each time, so the app can open every message ready for you but can't send them for you.

The Message sheet: one tap per customer

6 When someone skips

Mark them **Skipped** when you get there. They stay in today's list marked Skipped and don't count towards the day, so the next customers move up to fill it and you don't lose the work.

Those customers weren't in your original message, so the day's **Message** button now says something like **Message · 3 new**. Tap it, and **Message next** takes you through just the new ones.

Owes you money? If you skip someone who still owes you from an earlier clean, the app asks you first, and offers **Skip and send a reminder**, which opens WhatsApp with a reminder of what they owe (wording in Settings).

If someone's skipped, today only tops back up to its real target: once you've passed it, nobody is pulled forward from the next day.

Fitting someone in: swipe left on a customer on a later day and tap **Do today**. They're booked for today.

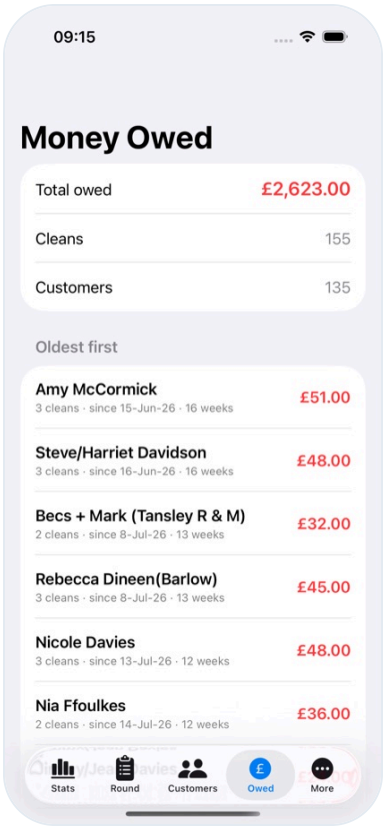

7 Getting paid

The Owed tab lists everyone with an unpaid clean, oldest first, with the total at the top.

1. Tap the customer.
2. Tap **Record payment...** and type what they paid.
3. Save. The money is taken off their oldest unpaid cleans first. Part-payments work too.

Paid more than they owe? Save it anyway: the extra is kept as **credit** and taken off their next clean automatically. Customers in credit are listed under **In credit** at the bottom of the Owed tab. Someone who pays ahead when they owe nothing: open their page and tap **Payment in advance...**.

Use the search bar at the top of Owed to find someone by name or address. You can also reach **Record payment** from any customer's page.

The Owed tab, oldest first

8 Looking after your customers

Find someone

On the Customers tab use the search bar (name, address, area or note). You can also filter by **Round**, **Area** or **Status**.

Where they are

Each customer's page has a small map. Tap it for directions in Maps. The app finds map positions from the addresses by itself while it's open, so give it a while after an update.

Change their details

Tap the customer, then **Edit**. Changing a price keeps a record of the old one. **Second price** is for customers who alternate, for example front only £10 and full £17.

Adding someone new

Pick their **Round** and **Area** from the lists (or **New...** for a new one). They go straight after the last customer in that round and area, unless you choose a different place with **Place in round**.

Correct a visit

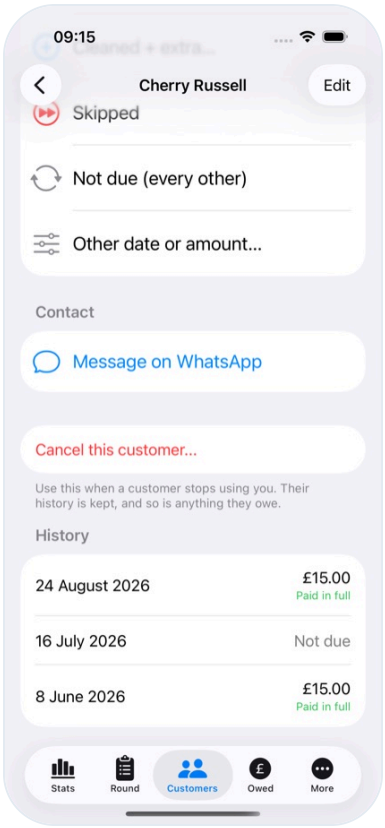

Open the customer and tap any visit under **History** to change its date, what happened, what was charged or paid, or the note. You can delete it there too.

Move someone in the round

On the Customers tab switch on **Reorder round** and drag them into place. Handy when a new street opens up.

Cancel a customer

Open their page, scroll down and tap **Cancel this customer...**. If they still owe you money, the app tells you first. Their history stays, and what they owe stays on the Owed list.

Cancelling is at the bottom of a customer's page

Find cancelled customers

On the Customers tab choose **Status** → **Cancelled**. If they come back, open them and tap **Reactivate this customer**.

A new person has moved into a cancelled customer's house

Open the cancelled customer's page and tap **Someone new has moved in...**. A new customer form opens with the **address, round, area, price and notes** already filled in. Type the new person's name and number and save. They go in the round right after the old customer, and start as Active.

Your stats stay right. The old customer keeps their own history and anything they owed. The new person starts fresh, so cleans, skips, "last cleaned" and what they owe are never mixed up with the person before them.

Delete a customer completely

Only for mistakes, such as a customer added twice. At the bottom of their page tap **Delete customer completely...**. It tells you how many cleans and how much money will come out of the stats, and saves a backup first. To keep someone's history, cancel them instead.

Other statuses

- **Paused**: away for a while. Not on the round until you reactivate them.

- **Leaving**: still being cleaned, but flagged as going.

9 The Stats screen

The first tab gives you the big picture at a glance.

This week
Work done against your weekly target.

Today
Today's work against the crew's day target.

Tax year
Everything you've earned since 6 April, paid or not.

Money owed
Total waiting to be paid.

Round value
What one full round of customers is worth.

Average per house
Each day's £ per house, averaged over the days, the same way as the spreadsheet.

Houses per workday
How many houses you do on a working day, over the last 12 months.

Round length
The typical gap between a customer's cleans, over the last 12 months. "Plan" is where today's round list is heading.

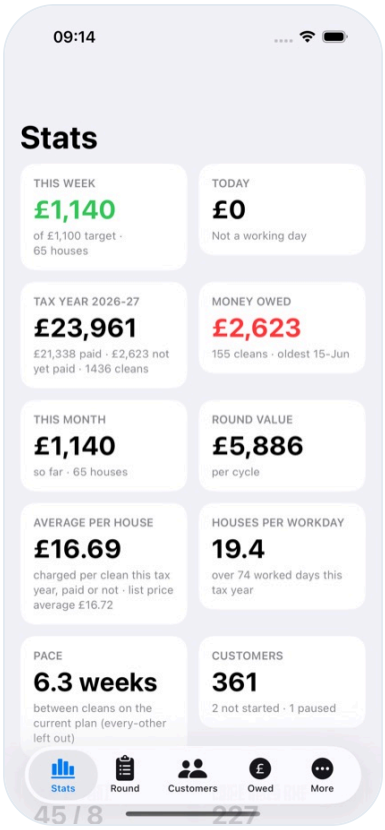

Skip rate
How often visits end up skipped.

Price rises due
Customers known to have had no rise in two years. Customers with no "price since" date are counted separately.

Below the cards, a chart shows the last twelve weeks. Green bars hit the target, orange bars fell short.

Tap a card with a › to see it over time, with a choice of 1, 3, 6 or 12 months or everything. Tax Year opens the full tax year, and Price rises due opens Price Rise.

Ideal lines in blue show what it takes to make your weekly target with a five-week round, working your usual days every week: the round value, the customers the crew can get round, and the average £ per house needed. They use your actual **houses per workday** (the one thing that can't easily change, so it has no ideal), your customers and your skip rate, over the last 12 months. Tapping one also shows the same sums using the days you've actually worked, weather and holidays included. Tap an Ideal line to see the working. Change the five weeks under Settings → **Target round length**.

The Stats screen

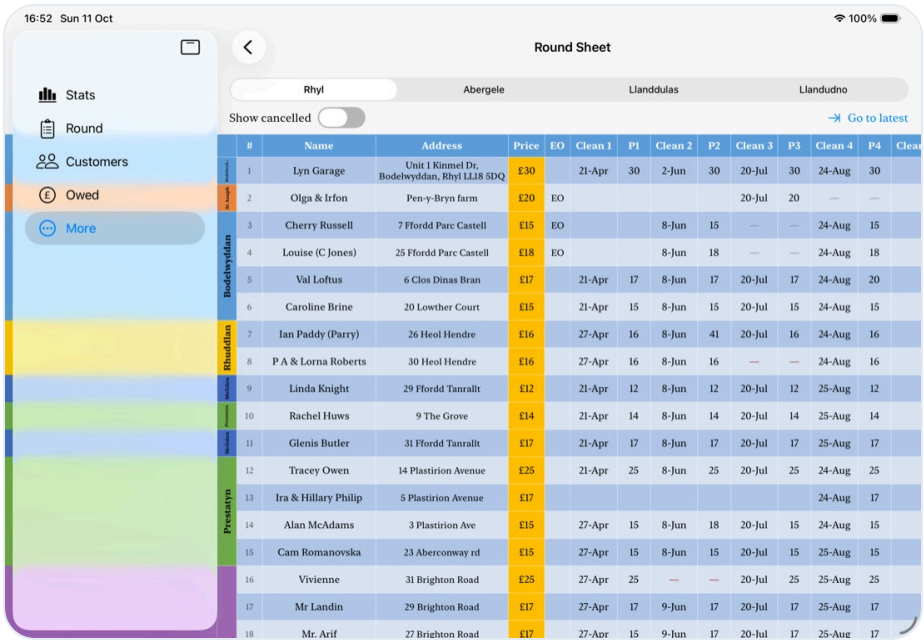

10 The Round Sheet

If you miss the old spreadsheet, this is it: your whole round on one page.

Open **More** → **Round Sheet**. There's a tab for each of your rounds, with every customer in round order, the area colours down the side, the price in yellow, and a pair of columns for each time round: **Clean 1 / P1**, **Clean 2 / P2** and so on. The first of each pair is the date, the second is what they paid.

- **—** means skipped or not due that time round.
- An orange **owes** means cleaned but not paid yet.
- Scroll sideways for older cleans. The names and prices stay put, and **Go to latest** jumps to the newest.
- Tap any customer's row to open their page.
- Cancelled customers are hidden unless you switch on **Show cancelled**.

It's a view only: log cleans on the Round tab as usual and they appear here.

The Round Sheet, laid out like your spreadsheet

11 The More menu

Weekly
Each week against its target.

Tax Year
Month by month totals. Share a file for your accounts.

Price Rise
Choose who gets a rise, set it, and tell them by WhatsApp. See below.

Round review
Houses that may be harming the round: cheap for the round, on their own, skipping a lot or slow to pay.

Frequent Skips
Customers who skip a lot.

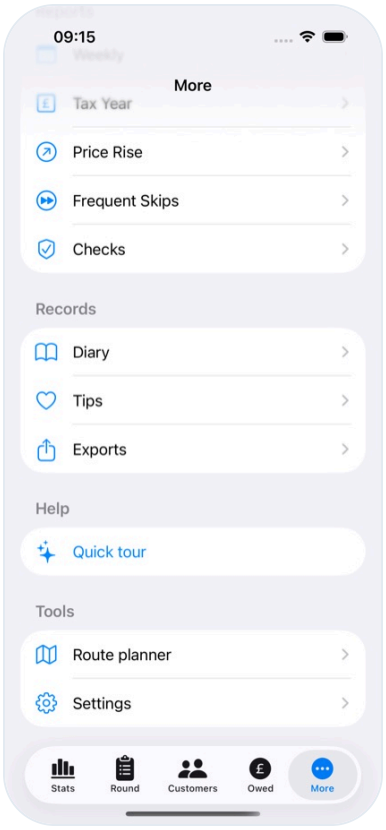

Checks
Customers paying under their price, and dates worth a second look.

History
Every visit, day by day, with totals. Search by name and pick the dates.

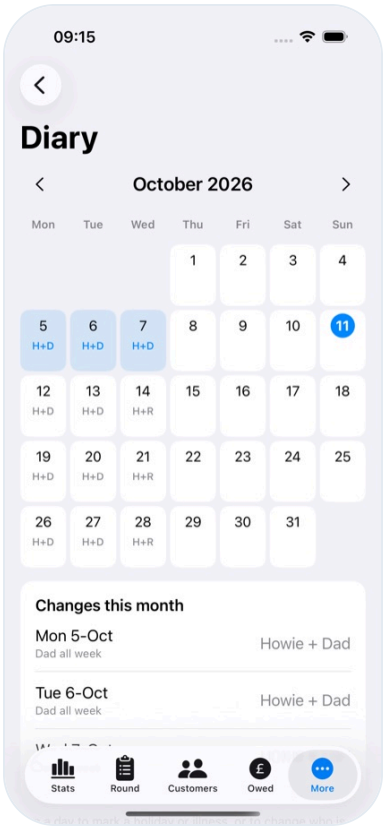

Diary
A calendar. Tap a day to mark a holiday or change the crew.

Tips
Record tips. They're never counted as income.

Exports
Customer list, tax year income list and a report for analysis.

The More menu

The Diary calendar

Price rises

1. **Choose.** More → Price Rise lists everyone due a rise, already ticked. Untick anyone to leave out, or tap their new price to change it.
2. **Set.** Tap **Set rises**. Each customer's page now shows "Rising to £16 from 6 Apr", with buttons to start it now, change it or cancel it.
3. **Tell them.** Tap **Tell customers**. Like the day messages, each tap opens WhatsApp with their message ready (wording in Settings), and ticks them off.

On the day, the new prices start by themselves and go in each customer's price history.

Share your working days

In **Settings → Calendar**, switch on **Keep a calendar up to date**. Splash Out adds a calendar to your phone showing who works each day (no money or customer details). Share it from the Calendar app with the people who need to see it. Switching it off removes it.

12 Keeping your data safe

Your round lives on your device, so it's worth knowing how it's protected.

Automatic, every day

Each day you use the app, it saves a full copy of everything on the phone. The last 14 days are kept. Find them in the **Files** app under **On My iPhone → Splash Out → Backups → Daily**. More → Settings → **Backup** shows when the last one was made, and **Back up now** makes one straight away.

A backup folder, so a copy leaves the phone (set up once)

The daily copies are on the same phone, so they don't help if the phone is lost or broken. Fix that once: go to More → Settings → **Backup** → **Choose a backup folder...** and pick a folder in **iCloud Drive** or **OneDrive** (make one first in the Files app, for example "Splash Out Backups"). From then on, each day's copy is saved there automatically, and the newest 30 are kept. Settings shows when the last one was copied, and turns orange if it stops working.

Until you've chosen a folder, an orange reminder appears at the top of Stats once a month.

Your phone's own backup

Switch on iCloud Backup for the phone (Settings → your name → iCloud → iCloud Backup). It saves the app and its data every night while charging, and it brings everything back on a new phone.

Putting a backup back

More → Settings → **Import round data...**, then pick the backup file. This replaces what's in the app, and the app saves a copy of what was there first.

What deletes your data. Deleting the app from the phone, and Import or Clear history in Settings (both ask first and save a copy first). Updating or re-signing the app does **not** touch your data.

13 Quick answers

A customer is greyed out on the Round list

They haven't started yet. Tap them and choose **Start ... put them on the round**.

A customer isn't on the Round list

Check their status. Paused and cancelled customers don't appear. Someone cleaned in the last five weeks won't appear until their turn comes round.

The Round list changed overnight

It's recalculated every day from who you've cleaned or skipped, so it always reflects where you've got to.

I logged the wrong thing

Tap **Undo** straight away. Later on, open the customer and tap the visit under **History** to change it or delete it.

A day's total doesn't match the spreadsheet

The app counts what was **charged** for each clean. Open More → History, pick the day and look for a clean charged more or less than usual (an extra, or a payment typed as the charge), then tap it to correct it.

What's changed in a new version?

More → Settings → **About** → **What's new**. The app also saves a backup the first time a new version opens.

A day shows more than its target

That's on purpose. Each day is filled until it reaches the target plus a little extra, so you've always got enough lined up. Keeping a street together can take it up to about 20% over.

Someone missed last time is further down the list

Customers are due when the round reaches them, so someone missed last time waits for their neighbours rather than jumping to the front.

The WhatsApp button wants a number

Tap **Add number from Contacts** on the customer's page and choose them.
