Splash Out

Your round, your customers and your money, all in one place.
A friendly guide to getting started.

In this guide

1. What Splash Out does
2. Setting up (once)
3. Adding your customers
4. A normal working day
5. Booking customers in
6. When someone skips
7. Getting paid
8. Looking after your customers
9. The Stats screen
10. The More menu
11. Keeping your data safe
12. Quick answers

1 What Splash Out does

Splash Out replaces your notebook or spreadsheet. It does six jobs for you:

Remembers your customers
Names, addresses, prices, notes and phone numbers.

Plans your round
Shows who is next, day by day, in round order.

Logs each clean
One tap: cleaned and paid, not paid, skipped.

Tracks who owes you
Every unpaid clean, oldest first.

Shows how you're doing
Weekly targets, tax year income and more.

Messages customers
Opens WhatsApp with a ready-made message.

There are five tabs along the bottom (or the top on an iPad):

Stats	Round	Customers	Owed	More
how you're doing	who's next	everyone	who owes you	everything else

2 Setting up (once)

Do this first. It takes about five minutes and makes the Round screen work properly.

1. **Add your team.** Go to More → Settings → **Team**. Type each person's name and tap **Add team member**.
2. **Make your crews.** Under **Crews and day targets** tap **Add a crew...**. A crew is a combination of people who work together, such as "Sam + Alex" or just "Sam". Give each crew a **day target**: how many pounds of work it aims to do in a day.
3. **Set your usual week.** Under **Usual week** choose which crew works on each day. Leave days you don't work as "Not working".

Why this matters. The usual week and the targets are how the app knows how many customers to line up for each day.

3 Adding your customers

Bring in a list you already have

On the Customers tab tap the **download arrow** (top left) and pick a spreadsheet saved as a CSV file. Match each column to a field (Name, Address, Price…) and tap **Import**.

Or add one at a time

1. On the Customers tab tap **+**.
2. Fill in the name, address, phone and price. Tap **Import from Contacts** at the top to copy a name, number and address from your phone's Contacts.
3. Choose where they go in the round with **Place in round**, then tap **Save**.

Good to know. A new customer starts as **Not started**, which keeps them off the Round list. When you're ready to book them in, edit them and set **Status** to **Active**. (Their first logged clean also makes them Active.)

Handy extras on each customer

- **Every other clean**: for customers you only visit every other round.
- **Front only**: a reminder that only the front is done.
- **Notes**: gate codes, pets, parking. They show up when you tap the customer on the round.
- **Contact by**: WhatsApp or Ring, so you get the right button.

4 A normal working day

Open the Round tab. It lists customers day by day, in the order you work them. The date bar stays at the top as you scroll, so you always know which day you're looking at.

1. **Tap the customer you're at.** A panel opens with their address, notes and anything they owe.
2. **Tap what happened:**
    - 3 **Cleaned & paid**: done, and they paid.
    - 4 **Cleaned, not paid**: done, they'll pay later. It goes on the Owed list.
    - 5 **Cleaned + extra...**: for something extra (conservatory roof) or less (front only). Add a note.
    - 6 **Skipped**: you couldn't do them today. They go to the back of the round.
    - 7 **Not due**: for every-other customers on their off round.
    - 8 **Other date or amount...**: for logging a clean from another day, or when they paid a different amount.
9. **Made a mistake?** A bar appears at the bottom for a few seconds. Tap **Undo**.

The list looks after itself. Each clean or skip moves the round on, and the list refills. Customers you've just cleaned drop to the back and come round again in about five weeks.

Quick way. On the Customers tab, swipe a row right for **Paid** or **Not paid**, or left for **Skipped**.

5 Booking customers in

When you book people in, let them know which day you're coming.

1. On the **Round** tab, find the day and tap **Message** on its date bar.
2. You'll see the message ready to go. Tap **Message next**. WhatsApp opens with the message filled in for that customer.
3. Press **Send** in WhatsApp, then come back and tap **Message next** again. Each customer you've done gets a tick.

The message fills in each customer's name and the day, for example *"Hi Anne, we're planning to clean your windows on Tuesday 13 October."* Change the wording any time in **More** → **Settings** → **WhatsApp message**.

Phone numbers. A customer with no number shows **Add number from Contacts** on their page. Tap it and pick them from your Contacts. WhatsApp itself makes you press Send each time, so the app can open every message ready for you but can't send them for you.

6 When someone skips

Mark them **Skipped** when you get there. They move to the back of the round, and the next customers move up to fill the day, so you don't lose the work.

Those customers weren't in your original message, so the day's **Message** button now says something like **Message · 3 new**. Tap it, and **Message next** takes you through just the new ones.

Owes you money? If you skip someone who still owes you from an earlier clean, the app asks you first, in case you want to collect before moving on.

7 Getting paid

The **Owed** tab lists everyone with an unpaid clean, oldest first, with the total at the top.

1. Tap the customer.
2. Tap **Record payment...** and type what they paid.
3. Save. The money is taken off their oldest unpaid cleans first. Part-payments work too.

You can also reach **Record payment** from any customer's page.

8 Looking after your customers

Find someone

On the Customers tab use the search bar (name, address, area or note). You can also filter by **Round**, **Area** or **Status**.

Change their details

Tap the customer, then **Edit**. Changing a price keeps a record of the old one.

Move someone in the round

On the Customers tab switch on **Reorder round** and drag them into place. Handy when a new street opens up.

Cancel a customer

Open their page, scroll down and tap **Cancel this customer...**. If they still owe you money, the app tells you first. Their history stays, and what they owe stays on the Owed list.

Find cancelled customers

On the Customers tab choose **Status** → **Cancelled**. If they come back, open them and tap **Reactivate this customer**.

Other statuses

- **Paused**: away for a while. Not on the round until you reactivate them.
- **Leaving**: still being cleaned, but flagged as going.

9 The Stats screen

The first tab gives you the big picture at a glance.

This week
Work done against your weekly target.

Today
Today's work against the crew's day target.

Tax year
Everything you've earned since 6 April, paid or not.

Money owed
Total waiting to be paid.

Round value
What one full round of customers is worth.

Average per house
What you charge for the average clean.

Houses per workday
How many houses you do on a working day.

Pace
How many weeks between cleans, on the current plan.

Skip rate
How often visits end up skipped.

Price rises due
Customers who haven't had a rise in two years.

Below the cards, a chart shows the last twelve weeks. Green bars hit the target, orange bars fell short.

10 The More menu

Weekly
Each week against its target.

Tax Year
Month by month totals. Share a file for your accounts.

Price Rise
Preview a rise for every customer, then apply it in one go.

Frequent Skips
Customers who skip a lot.

Checks
Customers paying under their price, and dates worth a second look.

Diary
A calendar. Tap a day to mark a holiday or change the crew.

Tips
Record tips. They're never counted as income.

Exports
Customer list, tax year income list and a report for analysis.

Share your working days

In **Settings → Calendar**, switch on **Keep a calendar up to date**. Splash Out adds a calendar to your phone showing who works each day (no money or customer details). Share it from the Calendar app with the people who need to see it. Switching it off removes it.

11 Keeping your data safe

- **Your data lives on your device.** Never delete the app to fix a problem. That deletes everything in it.
- **Make a backup now and then.** Go to More → Settings → **Export backup...** and save the file somewhere safe, like OneDrive or iCloud Drive.
- **Starting on a new device?** Use **Import round data...** with your backup file.
- The app also makes its own safety copies before big changes. Ask whoever set up the app if you ever need one restored.

12 Quick answers

A customer isn't on the Round list

Check their status. Only **Active** and **Leaving** customers appear. Someone cleaned in the last five weeks won't appear until their turn comes round.

The Round list changed overnight

It's recalculated every day from who you've cleaned or skipped, so it always reflects where you've got to.

I logged the wrong thing

Tap **Undo** straight away. Later on, open the customer, find the visit under **History** and swipe it to delete.

A day shows more than its target

That's on purpose. Each day is filled until it reaches the target plus a little extra, so you've always got enough lined up.

The WhatsApp button wants a number

Tap **Add number from Contacts** on the customer's page and choose them.
